(1st lesson) Mapping class groups of 4-manifolds

Monday, 22 September 2025 09:00 (1 hour)

I will introduce the topic of mapping class groups of 4-manifolds, which can be studied using algebraic topology, gauge theory, and geometric methods. I will survey what is known, give an outline of some of the methods of proof, and highlight some open questions. I will particularly focus on pseudo-isotopy theory.
