

# Backreacting w/ the background field method

Julio Parra-Martinez (UBC)

+ Cheung, Rothstein, Shah, Wilson-Gerow

Correlators @ Cortona '23

# Motivation

LIGO/VIRGO

$$10^1 \sim 10^5 \text{ } \mu\text{s}$$

$$\lambda = \frac{m_1}{m_2} \sim 1$$

inspiral      merger      ringdown

PN  $\frac{v^2}{c^2} \sim \frac{Gm}{r} \ll 1$

NR      BHPT

PM  $\frac{G\Lambda}{r} \ll 1$

# Motivation

LISA

$10^{-5} - 10^0 \text{ Hz}$

$$\lambda = \frac{v_1}{v_2} \sim 10^{-9}$$

EARI

- Relativistic PN X
- Strong field PM X
- Large Hierarchy NR X

# Gravitational Self Force

- Leading order OSF  $\lambda^0$

"Geodesic in Schwarzschild"

- ISF  $\lambda^1$

"Backreaction of light body  
on itself"

# Gravitational Self Force

- On-shell action OSF

$$I^\circ = m_L \int \bar{g}_{\mu\nu}^{\text{schw}} \dot{\bar{x}}^\mu \dot{\bar{x}}^\nu d\tau$$

$$\ddot{\bar{x}}^\mu + \Gamma^{\mu}_{\alpha\beta} \dot{\bar{x}}^\alpha \dot{\bar{x}}^\beta = 0$$

$$\frac{\partial I^\circ}{\partial \tau} \sim \Omega \quad \frac{\partial I^\circ}{\partial \bar{x}} = \chi$$

- ISF

"geodesic source"

"graviton prop"

1SF = 1 classical loop

$$\mathbb{B} \langle h(x) h(y) \rangle = \delta(x, y)$$

$$\langle h(x) h(y) \rangle = \sum_{n, l} \frac{\bar{h}(x) \bar{h}(y)}{E - E_{n, l}}$$

$$\sum_{n, l} \frac{\bar{h}(x) \bar{h}(y)}{E - E_{n, l}} \quad \text{with } \mathbb{B} \bar{h} = 0$$

LISA CHALLENGE = 1 CLASSICAL LOOP.

## Why work on this?

- Experiment!
- Interesting QFT problem.
- New fun arena to apply  
QFT/EFT

## Our setup

- Interacting w/

$$S = \frac{1}{16\pi G} \int d^4x R + \sum_{i=L,H} m_i \int d\tau$$

- Usual approach

$$x_i^\mu = b_i^\mu + u_i^\mu \tau + \delta x_\mu^i$$

$$g_{\mu\nu} = \eta_{\mu\nu} + h_{\mu\nu}$$

# EMREFT

$$g_{\mu\nu} = g_{\mu\nu}^{\text{sch}} + h_{\mu\nu}$$

$$X_H = u_H T + \delta X_H$$

$$X_L = \overline{X}_L + \delta X_L$$

$\uparrow$  geodesic solution

- Effective action

$$S = \int h \square h + h \overline{T}_L + \frac{\delta T^\mu{}_\mu}{\partial t^2} \delta T^\mu{}_\mu$$

Recoil op  $\rightarrow$

# Feynman Rules @ ISF

$$\text{double wavy line} = \text{wavy line} + \text{wavy line with circled L} + \text{wavy line with circled H}$$

• ISF on-shell action

Onshell action @ 25F

+

+

# Classical resummation

P.H

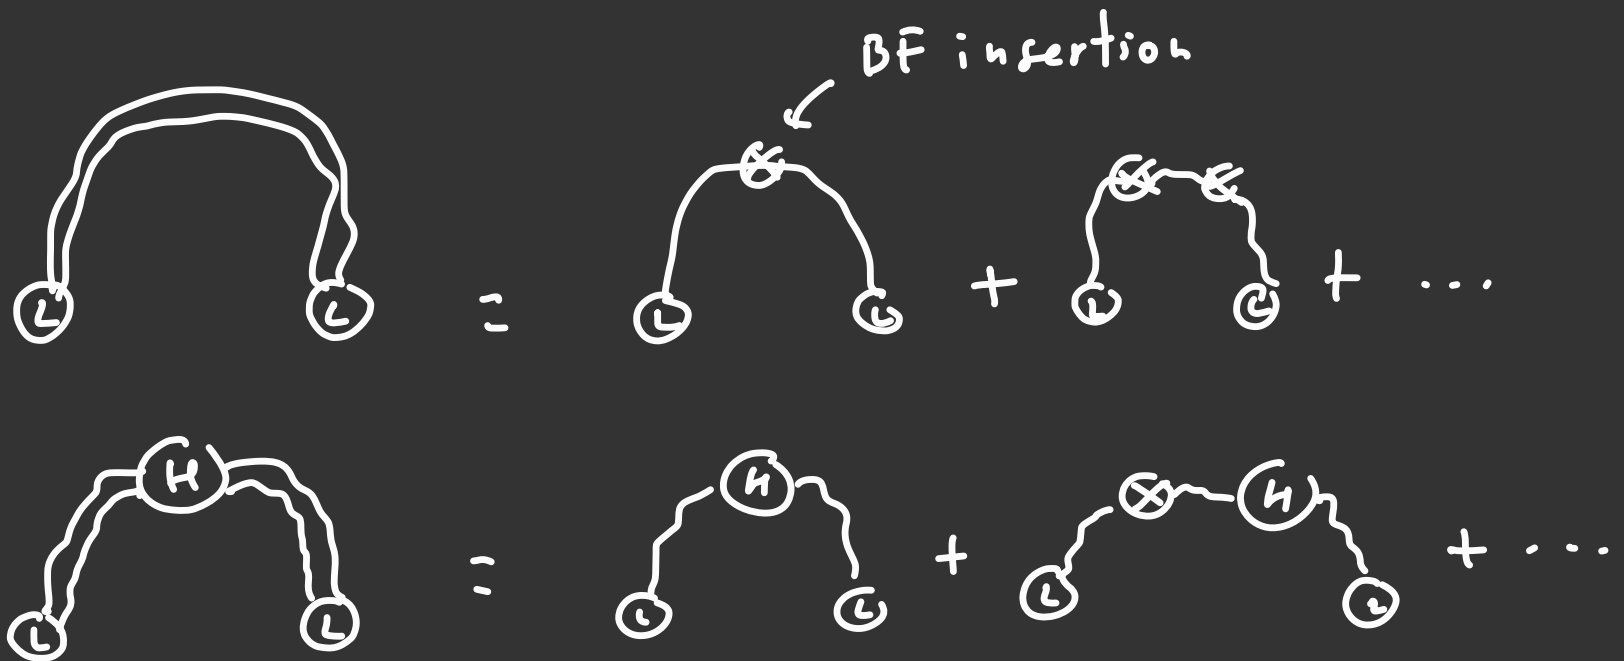

$$g_{\mu\nu}^{\text{Sch}} = \begin{array}{c} \otimes \\ | \\ \dots \end{array} + \begin{array}{c} \otimes \quad \otimes \\ \diagdown \quad / \\ | \\ \dots \end{array} + \begin{array}{c} \otimes \quad \otimes \quad \otimes \\ \diagdown \quad / \quad \diagdown \quad / \\ | \\ \dots \end{array} + \begin{array}{c} \otimes \quad \otimes \quad \otimes \\ \diagdown \quad / \quad \diagdown \quad / \\ | \\ \dots \end{array} + \dots$$

• Also geodesics

$$\overline{X}_L = \begin{array}{c} \otimes \\ | \\ \text{---} \\ \text{---} \end{array} + \begin{array}{c} \otimes \quad \otimes \\ | \quad | \\ \text{---} \\ \text{---} \end{array} + \begin{array}{c} \otimes \quad \otimes \\ \diagdown \quad / \\ | \\ \text{---} \\ \text{---} \end{array} + \dots$$

$$\underline{PM + SF = BFM + Recoil!}$$

- State of the art 4PM  $G^4$

- Huge simplification.

# Summary

- New EFT for extreme mass ratios
- Recoiling backgrounds ✓
- Reproduced SOA @ 1SF
- Checked @ 2SF
- Important problem
