The Lean theorem prover

Tuesday, 18 June 2024 15:30 (50 minutes)

Interactive theorem provers are a kind of programming languages in which one explains proofs to a computer in a formal language, where the computer checks that the proof respects the rules of logic. I will present the Lean theorem prover, together with its mathematics library Mathlib. This library is advanced enough that one may start to formalize complicated statements in dynamics (and all other areas of mathematics!)

Presenter: Prof. GOUËZEL, Sébastien (CNRS and Université de Rennes)
